

MARINE INDUSTRIES VICTORIA

INDUSTRY & FLEET CAPABILITIES

MARITIME OPERATIONS & SUPPORT

ABOUT US

Marine Industries Victoria (MIV) has been involved in the commercial maritime and diving industries in Victoria for over thirty years. Through this time, we have developed a wide range of skills and experience in performing simple to complex marine and subsea works for a wide variety of clients.

Specialising in vessel supply, maintenance and operations, Marine Industries Victoria is capable of catering for the needs of many different commercial applications.

Our vessel fleet and our ability to procure project-specific vessels makes our organisational capabilities almost unrivalled in the passenger / crew transfer, dive support and commercial charter sectors. The right vessel for the right task optimises the project's efficiency and safety. Our team of vessel masters, deck personnel, dive supervisors and marine engineers are among some of the most experienced and respected mariners in the Victorian Maritime industry and beyond.

INDUSTRY EXPERTISE

- Experience with Tier 1 Government Infrastructure Projects;
- Local primary partner for project management of all vessel & diving services;
- Multi-purpose utility Vessels, crew transfer vessels & emergency evacuation capabilities;
- Specialist in Maritime and Diving Operations;
- 30 years of dive operations and supervision experience in Australian waters;
- Local work yards in Queenscliff, Portarlington, Wyndham & Martha Cove
- Team experienced maritime personnel locally based for deployment across Australia;
- Local Area Knowledge certifications for Victorian waters;
- Custom vessel supplier and specialised machinery.

INDUSTRY CAPABILITIES

At Marine Industries Victoria we pride ourselves in being able to plan and deliver an organised and controlled project following the principles of excellent project management practices. Marine Industries Victoria utilise structured, developed and sound project management principles, which result in the proven performance of meeting client demands. By using these techniques, we are able to adapt and provide flexibility, allowing for complete control on all project fronts resulting in project closure on time, in budget and exceeding our clients' expectations.

KEY CAPABILITIES

- Effective cost control, the establishment and approval of budgets, and the ongoing exercise of comparing the proposed project schedule versus actual development stage, keeps costs low whilst maintaining high value in the service provided;
- Quality Control & Assurance Plans; coupled with an extensive electronic
- Safety Management System are reviewed prior to commencement of works and updated to suit the methodology of the proposed works, ensuring transparency between sub-contractors and client to ensure safe and consistent delivery of services;
- Administration support services;
- Equipment of the latest technologies;
- Highly motivated and experienced personnel; extensive knowledge of working in the Australian Maritime & Infrastructure Industry;
- Development of procedures, specifications and safety documentation;
- Compliance with project safety and environmental requirements;
- Compliance with Australian laws, regulations and industrial union requirements;
- Compliance with Client specific and other Subcontractor recommendations;
- Acquisition / manufacture on any project specific equipment;
- Certification of all equipment.

DIVER SUPPORT

GENERAL UTILITY

Having the right vessel for the job is key to the success of any project. Many jobs require specialised craft to perform the role safely & efficiently. We have a long history of supplying commercial vessels for various applications – from light commercial work to Tier 1 Infrastructure Maritime Support.

Our extensive background in the Maritime Industry backed by our inhouse engineers, fabricators and specialised maintenance teams means that we not only can supply the right equipment for the task but we can ensure that it is capable of operating 24 / 7 to ensure that there is no costly down time during a project.

Our range of craft ranges from work punts to large crew transfer vessels, specialised tugs and barges.

Whatever your requirement we can supply or source the perfect vessel for your needs.

OTHER COMMERCIAL SERVICES

LIGHT COMMERCIAL

Our team has extensive experience in making straightforward above-water tasks happen under the water in a safe and efficient manner.

From hull inspections, cleaning or anode changes through to the repair or replacement of specialised installations, our team has the experience and tooling to tackle the smallest pool repair through to deep ocean complex repairs.

COMMERCIAL DIVING

Our team is qualified & experienced to handle the hardest tasks and the deepest depths in commercial diving.

No matter if your project requires demolition of the largest of structures or high precision underwater fabrication and installation, Marine Industries Victoria can handle your task.

Using the latest industry technologies and materials we specialise in finding our clients the most effective application and service to meet the project needs. Our team is familiar with the use of all forms of underwater testing, cutting and welding applications and can develop custom built equipment saving our clients time and money.

Having the ability to dive is only one part of the task, having a team to evaluate, engineer and facilitate the best method of achieving the project means our dive teams can be more effective whilst underwater and our results exceed client expectations.

SCIENTIFIC DIVING

Our commercially recognised training and research program meets and exceeds international marine scientific diving requirements and has been created with the Australian Government to train scientists that take part in marine research activities; such as surveying, monitoring and inspecting.

Our team are all trained and certified in compliance with the Australian Standards for Occupational and Scientific Diving Operations, with necessary skills required to conduct scientific diving under safe circumstances and in an efficient manner.

This experience and expertise in the scientific aspect of underwater environments coupled with the added benefit of being occupational divers and with years of experience means that we can provide expert knowledge with well-established methods for data collection, both qualitative and quantitative, to cater for any project requirement our clients may require.

- High resolution underwater photography and videography analysis; Installation of remote baited camera traps for species identification;
- Organism relocation with post and pre-transplant monitoring;
- Taxonomic identification and biodiversity surveys;
- Nekton and plankton biodiversity surveys using a range of sampling techniques including nets and hand collection;
- Benthic and epifaunal communities surveys, including algae, macro algae, hard and soft corals and sea grass meadows;
- Dredging and sediment collection;
- GPS overlay drop camera work;
- Water sampling for salinity, turbidity and a variety of abiotic factors;
- Acoustic monitoring and mitigation measures for marine mammals in relation to military and commercial noise pollution;
- Installation and maintenance of artificial habitats;
- Specific commercially operated vessels for subsea survey, dive & scientific team support in varying conditions from inland to offshore capabilities.
